

CleanLink Site Master

CleanLink Software Ltd is launching a new web-hosted work scheduling and site auditing application. CleanLink Site Master is designed for companies to quickly set up new clients & contracts, plan and manage their site-based work, and design and use of online forms to capture data.

Building on 15 years' experience of providing industry-leading software via their Site Manager installed client/server application and their Mobile apps for both iOS and Android devices, CleanLink have continued to invest in the latest web and cloud-based technology after successfully rolling out the web-hosted CleanLink Portal last year.

A key aspect of CleanLink's software has been the ability to rapidly capture and share information in real time. This has been an important factor in helping many of their clients to grow by improving productivity and efficiency of their staff. Site Master continues in this way and is quick to use and easy to share updated information at the touch of a screen.

The application is available as a Software as a Service (SaaS) subscription and is compatible with any device with a web browser and an internet connection - either PC, laptop or touch screen tablet.
